Functional Requirements Document: Cooperative Operating Platform

Oct 9, 2026 · @Abubakar

Purpose, scope and conventions

This document specifies what the Cooperative Operating Platform must do for release 1 (staff cooperative pilot) and release 2 (payroll scale-out and estates). It turns the problem statement, the business rules, the payroll check-off design, the bank automation design and the CoopHub review into testable requirements, user stories and acceptance criteria.

Product in one sentence

A bank-neutral system of record and control for registered cooperatives: member ledger, loans, payroll deduction schedules and line-by-line remittance reconciliation, two-signature payments executed by a partner bank, statutory accounting and governance, and member access over USSD and app. The platform never holds money.

In scope

Release	Scope
R1 — Staff cooperative pilot (months 0–9)	M1 society onboarding; M2 members, identity, consent; M3 ledger; M4 savings; M5 loans and guarantors; M6 deduction schedules (file export); M7 remittance reconciliation and employer arrears; M8 payments and approvals; M9 bank integration (virtual accounts, webhooks, statements, transfers); M10 governance (core); M11 year end; M12 exit; M13 statements and reports; M14 USSD and app; M15 employer console (basic); M17 administration and audit

Release	Scope
R2 — Payroll scale and estates (months 9–24)	IPPIS, Remita and state payroll adapters; direct-debit fallback; employer console (full); M16 estates and escrow; investment-club NAV accounting; Director returns; registry (CVN/CoopID) integration when published

Out of scope

Holding customer funds; lending from the platform's own balance sheet; consumer group-savings products; ajo collector networks (release 3); SEC-regulated discretionary investment management; tax filing on behalf of societies.

Conventions

- **Requirement IDs**: FR-M{module}-{nn}, e.g. FR-M7-04. Non-functional: NFR-{nn}.
- **User story IDs**: US-M{module}-{nn}, written as "As a {role}, I want {capability}, so that {outcome}".
- **Acceptance criteria**: Given / When / Then, each independently testable; numbered AC-{story}-{n}.
- **Priority**: **Must** (release blocker), **Should** (in release if possible), **Could** (later).
- **Rule references**: business rules are cited by source, e.g. Act s.34 (Nigerian Co-operative Societies Act), Labour Act s.5, bye-law parameter.
- **Configurable**: any value marked *configurable* is a society-level bye-law parameter set in M1, with the stated default.

Roles and permissions

Permissions are granted per society. A person may hold several roles, but the system blocks any combination the rules forbid (for example, approving a payment one initiated).

Capability	Member	Treasurer / secretary	Signatory (3)	Committee	Supervisory committee	Auditor	Employer payroll officer	Platform support	Platform admin

Separation rules (Must):

- SR-1: The initiator of a payment cannot approve it.
- SR-2: A signatory cannot approve a payment to themselves, a relative registered in the related-party register, or an entity they control.
- SR-3: No platform role can initiate, approve or sign a society payment.
- SR-4: A member who is a guarantor on a loan cannot approve that loan as a committee member.
- SR-5: Platform administrative actions require two administrators and a 24-hour delay, and are visible in the society's audit log.

Glossary

Term	Meaning in this document
Society	A registered cooperative society (Nigerian Co-operative Societies Act or state law) using the platform
Common-bond employer	The employer whose staff form a staff cooperative and whose payroll deducts for it
Operating account	The society's current account at the partner bank, under the platform-channel mandate
Project account	A separate society account for estate or venture funds, with a release condition
Virtual account	A bank-issued account number mapped to the operating account, one per employer, identifying the payer of each credit
Mandate	The bank's record of who may instruct the account and how (platform channel, two of three signatories, limits)
Deduction authority	A member's signed, specific consent to payroll deductions (Labour Act s.5(2))
Expected line	One member's scheduled deduction for one period and one purpose (savings, loan, share)

Term	Meaning in this document
Schedule version	An immutable, hashed set of expected lines sent to an employer for a period
Remittance	The money an employer pays the society for a period, plus the schedule file describing it
Unapplied remittance	Money received but not yet matched to member lines
Variance	Any expected or remitted line that does not match exactly (partial, missing, unexpected, duplicate, period shift, short remittance)
Employer receivable	Deducted-but-unremitted money owed by an employer, aged in buckets
Headroom	One-third of gross pay minus all known non-statutory deductions (configurable cap)
Appropriation	The year-end split of surplus: reserve (≥25%), education (≤10% of remainder), honoraria, dividend, bonus (Act s.34)
Release token	A platform-signed proof that a project-account payment's evidence rule is satisfied
CVN / CoopID	Cooperative Verification Number (society) and member ID linked to NIN, from the national registry
USSD	Unstructured Supplementary Service Data: menu access from any mobile phone without data

M1. Society onboarding and configuration

Requirements

ID	Requirement	Priority
FR-M1-01	Register a society with registration certificate, registering authority (state or FCT), registration number, date, bye-laws, officers' list and registered address	Must
FR-M1-02	Capture bye-law parameters: minimum monthly savings by grade; loan multiples by product; interest rates and method (flat, reducing); waiting period; guarantors per loan; deduction cap (default one-third of gross pay); signatory rule (default two of three); spending limits per tier; withdrawal limits; exit charges; appropriation percentages; committee size and term limits	Must
FR-M1-03	Changes to bye-law parameters take effect only after a recorded general-meeting resolution, with an effective date; prior values are retained with history	Must
FR-M1-04	Register three signatories with BVN-verified identity, phone and device binding	Must
FR-M1-05	Link the society to a partner bank: operating account, optional project account, mandate reference, API credentials, webhook endpoints	Must
FR-M1-06	Register common-bond employers with payroll platform type, payroll identifier format, cut-off day, pay day and contact	Must
FR-M1-07	Import opening balances (member savings, shares, loans) from a template with validation and a reconciliation to the society's last audited accounts	Must

ID	Requirement	Priority
FR-M1-08	Run historical reconciliation on up to 12 months of past schedules and bank credits to produce opening employer receivables	Should
FR-M1-09	Record the society's CVN when the national registry issues it	Could

User stories

US-M1-01 As a society secretary, I want to register my cooperative and its bye-law rules, so that the system enforces our own rules instead of our memory.

- AC-1: **Given** a secretary with the certificate and bye-laws, **when** they complete registration, **then** the society is created in "pending activation" with every mandatory parameter set or defaulted, and each default is listed for confirmation.
- AC-2: **Given** a parameter outside its permitted range (for example deduction cap above 50% or fewer than two required signatories), **when** it is saved, **then** it is rejected with the permitted range shown.
- AC-3: **Given** the society is pending, **when** the committee confirms parameters and the bank link is verified, **then** the society becomes "active" and the activation is logged with both events.

US-M1-02 As a committee member, I want parameter changes to require a recorded resolution, so that no officer can quietly change loan or withdrawal rules.

- AC-1: **Given** an active society, **when** a treasurer proposes a new loan multiple, **then** it is saved as "proposed" and has no effect.
- AC-2: **Given** a proposed change, **when** a general-meeting resolution with quorum is recorded referencing it, **then** the change takes effect on the stated date and the prior value remains visible in history.
- AC-3: **Given** a change took effect, **when** any member views the bye-law parameters, **then** they see the current value, the effective date and the resolution reference.

US-M1-03 As a treasurer, I want to load our existing balances and see last year's arrears, so that we start from a true position.

- AC-1: **Given** an opening-balance file, **when** it is imported, **then** every row is validated (member exists, amounts numeric, loans have schedules) and rejected rows are listed with reasons; nothing posts until all rows pass or are excluded.

- AC-2: **Given** imported balances, **when** the import is confirmed, **then** totals equal the society's last audited balance sheet within ₦1, or the difference is posted to a suspense account requiring committee sign-off.
- AC-3: **Given** past schedules and statements, **when** historical reconciliation runs, **then** an opening employer-receivable balance per employer is produced with line-level detail.

M2. Members, identity and consent

Requirements

ID	Requirement	Priority
FR-M2-01	Enrol members with name, BVN or NIN (verified), phone, employer, payroll identifier, grade, confirmation status, date joined, nominee(s) with shares	Must
FR-M2-02	Capture a signed deduction authority per member (e-signature, USSD PIN confirmation or scanned paper), stored immutably with timestamp and referenced by every expected line	Must
FR-M2-03	Allow a member to revoke the deduction authority with a notice period (configurable, default one payroll cycle)	Must
FR-M2-04	Maintain a related-party register: officers' declared relatives and controlled entities	Must
FR-M2-05	Store a deduction profile per member: gross pay (from payslip upload or employer data), statutory deductions, and declared outside deductions	Must
FR-M2-06	Flag duplicate members by BVN, NIN or payroll identifier	Must
FR-M2-07	Support associate members (contract or unconfirmed staff) with restricted product eligibility	Should

ID	Requirement	Priority
FR-M2-08	Verify employment status against an employer file or console where available	Should

User stories

US-M2-01 As a member, I want to consent to deductions once, clearly and provably, so that nobody can deduct from my salary without my agreement.

- AC-1: **Given** a new member, **when** they consent by e-signature or USSD PIN, **then** a consent record is stored with the amount type, the start date, the method and a hash, and the member receives an SMS confirmation.
- AC-2: **Given** no consent on file, **when** a schedule is built, **then** no expected line is created for that member and the member appears in the schedule exceptions list.
- AC-3: **Given** a member revokes consent, **when** the next schedule is built after the notice period, **then** no savings or new-loan lines are created; existing loan lines continue only if the loan agreement permits and that permission is shown.

US-M2-02 As a treasurer, I want each member's gross pay and other deductions on file, so that I never approve a loan that breaks the one-third rule.

- AC-1: **Given** a payslip upload, **when** it is processed, **then** gross pay, statutory deductions and third-party deductions are recorded with the payslip date.
- AC-2: **Given** a deduction profile older than 3 months (configurable), **when** a loan is applied for, **then** the system requires a newer payslip before approval.

US-M2-03 As a supervisory committee member, I want officers' relatives and companies registered, so that related-party payments are caught.

- AC-1: **Given** an officer, **when** they take office, **then** they must complete a related-party declaration before receiving approval rights.
- AC-2: **Given** a payment to a registered related party, **when** it is initiated, **then** it is flagged and routed to the general-meeting approval tier.

M3. Ledger and accounting

Requirements

ID	Requirement	Priority
FR-M3-01	Maintain a double-entry general ledger per society with a configurable chart of accounts seeded for Nigerian cooperatives (savings, shares, loans, interest income, reserve fund, education fund, unapplied remittances, employer receivables, suspense, bank)	Must
FR-M3-02	Journals are append-only; every journal has an id, timestamp, source event, user or system actor and a hash chained to the previous journal	Must
FR-M3-03	Corrections are made only by reversing journals that reference the original; no journal can be edited or deleted by any role	Must
FR-M3-04	Member sub-ledgers for savings (by type), shares, each loan (principal, interest, penalties) and guarantor exposure	Must
FR-M3-05	Daily bank reconciliation: every bank statement line matched to a journal or raised as an unmatched item with an owner	Must
FR-M3-06	Period close (monthly) locks the period; postings after close go to the next open period with a reference	Must
FR-M3-07	Trial balance, balance sheet and income statement on demand for any closed period	Must
FR-M3-08	Replay: rebuild all balances from journal one and compare to stored balances; any difference raises a critical alert	Must
FR-M3-09	Unit (NAV) accounting for investment-club ledgers	Could (R2)

User stories

US-M3-01 As an external auditor, I want to reproduce any balance from the journals and bank statements without platform help, so that I can certify the accounts independently.

- AC-1: **Given** auditor access, **when** they export a period, **then** the export contains every journal, the hash chain, the bank statements, the schedule versions, remittance files and match results for the period.
- AC-2: **Given** the export, **when** journals are summed by account, **then** they equal the trial balance to the kobo.
- AC-3: **Given** any journal in the chain is altered in the export, **when** the hash chain is verified, **then** verification fails at that journal.

US-M3-02 As a treasurer, I want the ledger and the bank to agree every day, so that a missing naira is found the day it goes missing.

- AC-1: **Given** the day's statement feed, **when** reconciliation runs at end of day, **then** ledger cash equals bank cash, or every difference appears as an unmatched item with amount, date and owner.
- AC-2: **Given** an unmatched item older than 7 days (configurable), **when** the daily job runs, **then** it is escalated to the committee and the supervisory committee.

US-M3-03 As a committee member, I want a mistaken posting corrected without erasing history, so that the audit trail stays intact.

- AC-1: **Given** a posted journal, **when** a correction is requested, **then** the only available action is a reversal plus a new journal, both referencing the original and a reason.
- AC-2: **Given** any user including platform administrators, **when** they attempt to edit or delete a posted journal through any interface or API, **then** the action is refused and the attempt is logged.

M4. Savings and contributions

Requirements

ID	Requirement	Priority
FR-M4-01	Savings products per society: ordinary, special, target (education, festive, retirement) with interest rate, lock period and withdrawal rules	Must

ID	Requirement	Priority
FR-M4-02	Standing monthly savings per member, at or above the grade minimum (configurable), feeding the deduction schedule	Must
FR-M4-03	Share capital purchases with the one-fifth cap per member (Act s.27) enforced	Must
FR-M4-04	Withdrawal requests subject to rules: not below lien for loans or guarantees; withdrawal limit (default 60% once a year, configurable); notice period; charges	Must
FR-M4-05	Dormancy: account marked dormant after N months without contribution (configurable, default 6)	Must
FR-M4-06	Interest on savings accrued monthly and credited per product rules	Should
FR-M4-07	Voluntary contributions by bank transfer to a member-specific reference or virtual account, matched automatically	Should

User stories

US-M4-01 As a member, I want to change my monthly savings amount, so that my contribution fits my pay.

- AC-1: **Given** a member, **when** they request a new amount via app or USSD, **then** the amount is accepted only if it is at or above their grade minimum and within headroom, and takes effect from the next schedule build.
- AC-2: **Given** a change after the schedule is frozen, **when** it is submitted, **then** the member is told it applies from the following month.

US-M4-02 As a member, I want to withdraw part of my savings when I need it, so that my money is not trapped.

- AC-1: **Given** a withdrawal request, **when** it is submitted, **then** the available amount shown equals balance minus loan lien, guarantee lien and minimum balance, capped by the configured withdrawal limit.

- AC-2: **Given** an eligible request, **when** it is approved under the payments workflow (M8), **then** funds are paid to the member's verified bank account and the ledger posts only on bank confirmation.
- AC-3: **Given** an ineligible request, **when** it is submitted, **then** the reason (lien, limit, notice) is shown and nothing is created.

US-M4-03 As a committee member, I want share purchases capped by law, so that no member exceeds one-fifth of share capital.

- AC-1: **Given** a share purchase that would take a member above 20% of total share capital, **when** it is submitted, **then** it is rejected with the maximum permitted amount shown.

M5. Loans and guarantors

Requirements

ID	Requirement	Priority
FR-M5-01	Loan products per society: normal, special, emergency, asset, housing; each with multiple of savings, maximum amount, tenor, rate, method (flat, reducing), up-front charges, penal rate	Must
FR-M5-02	Eligibility checks at application: waiting period met; no loan in arrears; amount within multiple and single-obligor limit; headroom within cap after the new instalment; guarantors meet rules	Must
FR-M5-03	Guarantor workflow: each named guarantor consents by app or USSD; system checks membership, confirmation status, years to retirement (configurable) and total guarantee exposure	Must
FR-M5-04	Approval by committee within limits; above limits escalates to the configured tier; guarantors and the applicant cannot approve	Must
FR-M5-05	Disbursement through the payments workflow (M8); loan is active only on bank confirmation	Must

ID	Requirement	Priority
FR-M5-06	Amortisation schedule generated and stored; instalments feed the deduction schedule (M6)	Must
FR-M5-07	Arrears classification: instalment due and unpaid because of the member vs because of employer non-remittance (employer-caused arrears do not age the member's loan)	Must
FR-M5-08	Default recovery order: set-off against savings, shares and dividends (Act s.16); then guarantors pro rata; then terminal benefits where bye-laws allow	Must
FR-M5-09	Top-up and refinance with the same eligibility checks	Should
FR-M5-10	Loan agreement generated and e-signed with the amortisation schedule attached	Should

User stories

US-M5-01 As a member, I want to apply for a loan from my phone and know at once whether I qualify, so that I don't wait weeks for a no.

- AC-1: **Given** a member, **when** they open a loan application, **then** the maximum eligible amount is shown with the limiting factor (multiple, headroom, single-obligor limit, waiting period).
- AC-2: **Given** an application above the maximum, **when** submitted, **then** it is rejected with the limiting factor named.
- AC-3: **Given** an eligible application, **when** submitted, **then** each named guarantor receives an SMS and app request to consent, and the application waits for all consents.

US-M5-02 As a guarantor, I want to see and accept exactly what I am guaranteeing, so that I am not exposed without knowing.

- AC-1: **Given** a guarantee request, **when** the guarantor opens it, **then** they see borrower, amount, tenor, their share of exposure and their total current guarantee exposure.
- AC-2: **Given** a guarantor's total exposure would exceed the configured limit, **when** they try to accept, **then** acceptance is blocked with the limit shown.

- AC-3: **Given** a guarantor accepts, **when** the loan is disbursed, **then** their savings carry a guarantee lien that blocks withdrawal and exit until the borrower has repaid the configured share.

US-M5-03 As a committee member, I want to approve loans with every check already done, so that I decide on judgement, not arithmetic.

- AC-1: **Given** an application with consents, **when** it reaches the committee, **then** the view shows eligibility results, headroom calculation with inputs, guarantor checks, related-party flags and the member's repayment history.
- AC-2: **Given** an approver who is the applicant, a guarantor or a related party, **when** they try to approve, **then** approval is refused.

US-M5-04 As a member, I don't want my loan marked late when my employer kept the money, so that I am not penalised for their default.

- AC-1: **Given** an instalment line marked "deducted, awaiting remittance" in M7, **when** the instalment falls due, **then** the loan status is "current — employer arrears" and no penal interest accrues.
- AC-2: **Given** the employer later remits, **when** the line is matched, **then** the instalment is posted as paid on the original due date.

US-M5-05 As a treasurer, I want defaulted loans recovered in the legal order, so that recovery is fair and defensible.

- AC-1: **Given** a loan in member-caused default beyond the configured days, **when** recovery is triggered, **then** the system proposes set-off from the borrower's savings, shares and dividends first, then guarantors pro rata to their guarantee, and shows each amount.
- AC-2: **Given** the proposal, **when** approved by the committee, **then** journals post with references to the loan and the bye-law clause, and each affected member is notified.

M6. Payroll deduction schedules

Requirements

ID	Requirement	Priority
FR-M6-01	Build expected lines per member per period from the ledger: standing savings, share purchases, loan instalments from amortisation schedules, approved changes	Must
FR-M6-02	Validate every line: consent on file; headroom within cap; member active and confirmed for the product; no line for a member under a variance hold (configurable)	Must
FR-M6-03	Freeze the schedule as an immutable version with a hash, period, employer, line count and total	Must
FR-M6-04	Export the version in the employer's layout through a versioned adapter (R1: generic Excel/CSV and two pilot employer layouts; R2: IPPIS, Remita, state layouts)	Must
FR-M6-05	Record delivery: channel, recipient, timestamp; employer acknowledgement in the console	Must
FR-M6-06	Optional committee approval of the schedule before sending (configurable)	Should
FR-M6-07	Publish each member's expected lines to USSD and app; SMS summary on freeze	Must
FR-M6-08	Schedule exceptions report: members excluded and why	Must
FR-M6-09	Scheduler builds the schedule automatically N days before the employer's cut-off (configurable, default 5)	Must

User stories

US-M6-01 As a treasurer, I want the monthly deduction schedule built from our records, so that I stop typing it into Excel.

- AC-1: **Given** an employer with cut-off day D, **when** day D minus 5 arrives, **then** a draft schedule is built containing one line per member per deduction type, each with payroll identifier, amount, code, period and consent reference.
- AC-2: **Given** the draft, **when** the treasurer opens it, **then** totals by type, line count, changes from last month and the exceptions list are shown.
- AC-3: **Given** the treasurer (and committee if configured) approves, **when** the schedule is frozen, **then** a version with hash is stored and cannot be changed; corrections create a new version.

US-M6-02 As a payroll officer, I want the schedule in my payroll's own format, so that I can load it without retyping.

- AC-1: **Given** a frozen version and an employer layout, **when** it is exported, **then** the file validates against the layout's column and type rules and its total equals the version total.
- AC-2: **Given** the export, **when** the officer downloads it from the console, **then** the download is logged and the society sees "delivered".

US-M6-03 As a member, I want to see what will be deducted before pay day, so that I can query it in time.

- AC-1: **Given** a frozen schedule, **when** the member dials USSD or opens the app, **then** they see each expected line with type and amount for the period.
- AC-2: **Given** the member disputes a line, **when** they raise a query, **then** a case is created for the treasurer with the line reference.

M7. Remittance reconciliation and employer arrears

Requirements

ID	Requirement	Priority
FR-M7-01	Record each bank credit to an employer's virtual account in unapplied remittances for that employer	Must

ID	Requirement	Priority
FR-M7-02	Ingest remittance schedules by console upload, email ingestion or API; parse through the employer's adapter; store the raw file	Must
FR-M7-03	Identifier mapping: propose matches for unknown identifiers (fuzzy name, BVN); require one human confirmation; store the mapping for future periods	Must
FR-M7-04	Matching engine classifies every line: matched, partial, missing, unexpected, duplicate, period shift	Must
FR-M7-05	Post matched lines to member sub-ledgers; never post any line without a schedule	Must
FR-M7-06	Three-way balance: schedule total, remittance-file total, bank credit; file-to-credit difference becomes a short-remittance receivable	Must
FR-M7-07	Variance cases with type, amount, member, employer, period, owner, due date, status and resolution path	Must
FR-M7-08	Employer receivable sub-ledger per employer, aged in buckets (0, 30, 60, 90, 180, 365+ days from pay date)	Must
FR-M7-09	Escalation actions on ageing thresholds (configurable): reminder, demand letter, Director escalation, provision, loan override, pre-action notice	Must
FR-M7-10	Employer statement and scorecard: lines received, lines missing, arrears, on-time rate, average days late	Must
FR-M7-11	Member status per line: scheduled, credited, deducted-awaiting-remittance, variance	Must
FR-M7-12	Refund workflow for unexpected and duplicate lines within the bye-law period	Must
FR-M7-13	Switch selected members to direct debit after employer default (M9)	Should (R2)

User stories

US-M7-01 As a treasurer, I want each employer credit matched to members automatically, so that posting takes minutes, not days.

- AC-1: **Given** a bank credit and a remittance file for the same employer and period, **when** reconciliation runs, **then** every schedule line and every file line ends in exactly one classification within one business day.
- AC-2: **Given** tier-1 matches, **when** reconciliation completes, **then** they are posted to member sub-ledgers and each member's line status becomes "credited".
- AC-3: **Given** schedule total, file total and credit, **when** reconciliation completes, **then** all three are shown; any file-to-credit gap is posted as a short-remittance receivable.

US-M7-02 As a treasurer, I want money that arrives without a schedule held aside, so that we never guess whose money it is.

- AC-1: **Given** a credit with no schedule, **when** it lands, **then** it is posted to unapplied remittances and no member balance changes.
- AC-2: **Given** no schedule after 1 business day, **when** the daily job runs, **then** a reminder goes to the employer contact; after 5 business days the committee is alerted.

US-M7-03 As a committee member, I want to know exactly what each employer owes us and for how long, so that we can act before liquidity runs out.

- AC-1: **Given** confirmed deducted-not-remitted lines, **when** the arrears report is opened, **then** each employer's receivable is shown by age bucket with drill-down to member lines.
- AC-2: **Given** an employer receivable crosses 30, 60 or 90 days, **when** the daily job runs, **then** the configured action is generated, logged and shown on the employer's statement.
- AC-3: **Given** arrears above 90 days for an employer, **when** a member of that employer applies for a loan, **then** committee override is required and recorded.

US-M7-04 As a member, I want to know whether my deduction reached the cooperative, so that I can see if my employer is holding my money.

- AC-1: **Given** a member line, **when** the member checks USSD or app, **then** the status shows scheduled, credited (with date), deducted-awaiting-remittance (with days outstanding) or variance (with case number).

US-M7-05 As a treasurer, I want unexpected or duplicate money refunded properly, so that we never keep money that isn't ours.

- AC-1: **Given** an unexpected or duplicate line, **when** it is confirmed, **then** a refund payment is created to the employer or member through M8 within the bye-law period, and the line closes only on bank confirmation.

M8. Payments and approvals

Requirements

ID	Requirement	Priority
FR-M8-01	Payment types: loan disbursement, savings withdrawal, exit payout, refund, dividend, supplier, project (estate)	Must
FR-M8-02	Initiation requires purpose, beneficiary (validated by name enquiry), amount, and the evidence record for the type (loan approval id; withdrawal eligibility; invoice; due-diligence record; milestone certificate)	Must
FR-M8-03	Limits per instruction, per day, per beneficiary and per type; above-limit payments escalate to the next approval tier	Must
FR-M8-04	Anti-splitting: payments to the same beneficiary and purpose within 30 days (configurable) are aggregated against limits	Must
FR-M8-05	Approval by two of three signatories (configurable, never fewer than two); each approval is a separate authenticated act (device-bound passkey or OTP)	Must
FR-M8-06	Separation rules SR-1 to SR-4 enforced	Must
FR-M8-07	On quorum, the platform signs and sends the instruction to the bank; ledger posts only on bank confirmation	Must
FR-M8-08	Failed instructions reopen with the bank reason code; nothing posts	Must
FR-M8-09	Bulk payments (dividends, refunds) as one approval over a frozen list	Must

ID	Requirement	Priority
FR-M8-10	Signatory change: general-meeting resolution, 48-hour cooling-off (configurable, minimum 24), notification to all members, bank re-mandate	Must
FR-M8-11	Payment expires if not approved within N days (configurable, default 7)	Should

User stories

US-M8-01 As a treasurer, I want to initiate payments with the evidence attached, so that approvers can decide quickly and safely.

- AC-1: **Given** a payment type, **when** the treasurer initiates it, **then** the system requires the evidence record for that type and blocks submission without it.
- AC-2: **Given** the beneficiary account, **when** it is entered, **then** a name enquiry runs and the returned name is shown; a mismatch with the member or vendor name requires a reason.

US-M8-02 As a signatory, I want to approve from my phone with everything I need to see, so that I never sign blind.

- AC-1: **Given** a pending payment, **when** the signatory opens it, **then** they see purpose, beneficiary, verified name, amount, evidence, related-party flags and the ledger effect.
- AC-2: **Given** the signatory initiated the payment, is the beneficiary, or is a related party, **when** they try to approve, **then** approval is refused.
- AC-3: **Given** the second approval, **when** it is recorded, **then** the instruction is sent to the bank within 60 seconds and both approvers are notified.

US-M8-03 As a general meeting, we want a signatory change to be slow and visible, so that nobody can capture the account overnight.

- AC-1: **Given** a request to change signatories, **when** it is initiated, **then** a recorded general-meeting resolution with quorum is required.
- AC-2: **Given** the resolution, **when** the change is submitted, **then** all members are notified and a cooling-off timer starts; during the window the society shows "signatories changing" and no new payment can be approved by an incoming signatory.
- AC-3: **Given** the window ends, **when** the bank confirms the re-mandate, **then** the new signatories become active and the old ones lose approval rights.

US-M8-04 As an auditor, I want every payment traceable from request to bank, so that I can test controls.

- AC-1: **Given** any payment, **when** viewed, **then** initiator, approvers with timestamps and device, evidence, instruction, bank reference and journal are linked.

M9. Bank integration

Requirements

ID	Requirement	Priority
FR-M9-01	Adapter per partner bank for: balance; transfer initiation and status; statement retrieval; credit and debit webhooks; virtual-account creation and listing; name enquiry	Must
FR-M9-02	One virtual account per employer per society, created on employer onboarding	Must
FR-M9-03	Webhooks are idempotent on the bank reference; replays ignored and logged	Must
FR-M9-04	Statements are the source of truth; webhooks accelerate; daily three-way check of ledger, statements and webhooks	Must
FR-M9-05	Instructions signed per society with keys in an HSM or cloud KMS; key rotation scheduled	Must
FR-M9-06	Support at least two partner banks; a society can migrate between banks with history intact	Should
FR-M9-07	NIBSS direct-debit mandates via the bank or a PSSP: create, activate, debit, cancel; results reconciled like remittances	Should (R2)
FR-M9-08	Project accounts with release-token verification where the bank supports it; otherwise platform-side evidence gate	Should (R2)
FR-M9-09	Bank outage handling: queue instructions, retry with backoff, alert; never execute twice	Must

User stories

US-M9-01 As a treasurer, I want each employer to pay into its own account number, so that I always know who paid.

- AC-1: **Given** a new employer, **when** it is onboarded, **then** a virtual account is created at the partner bank and shown on the employer's console and statement.
- AC-2: **Given** a credit to that virtual account, **when** the webhook arrives, **then** the credit is attributed to that employer within 60 seconds.

US-M9-02 As a treasurer, I want the ledger to reconcile itself to the bank, so that I don't download statements.

- AC-1: **Given** the end of day, **when** the statement job runs, **then** every statement line is matched to a journal or raised as unmatched.
- AC-2: **Given** a webhook that was never received, **when** the statement line appears, **then** the credit is recorded from the statement and flagged "webhook missing".

US-M9-03 As a platform engineer, I want bank failures to be safe, so that no payment is ever sent twice or lost.

- AC-1: **Given** a transfer call that times out, **when** retried, **then** the same idempotency key is used and the bank status is queried before any resend.
- AC-2: **Given** the bank reports success after a timeout, **when** reconciled, **then** exactly one journal posts.

US-M9-04 As a member whose employer stopped remitting, I want to pay by direct debit, so that my loan stays current. *(R2)*

- AC-1: **Given** consent and a bank account, **when** a mandate is created, **then** the member is told to make the ₦50 verification transfer and the mandate status is tracked to active.
- AC-2: **Given** an active mandate, **when** the instalment falls due, **then** the debit runs, and success or failure is reconciled to the member's loan.

M10. Governance and meetings

Requirements

ID	Requirement	Priority
FR-M10-01	Officers register: role, start date, term length, consecutive-term limit (configurable, default two 2-year terms); alerts before term end	Must

ID	Requirement	Priority
FR-M10-02	Meetings: AGM, general and committee meetings with notice (default 21 days for general meetings), agenda, attendance, quorum (default one-quarter of members), minutes	Must
FR-M10-03	Resolutions recorded with type (ordinary, special at 75%), votes, and links to the actions they authorise	Must
FR-M10-04	Remote voting by app or USSD for resolutions where bye-laws permit	Should
FR-M10-05	Related-party transactions require general-meeting approval and are listed in the annual report	Must
FR-M10-06	Members may inspect books (request logged, fulfilled within 7 days)	Should

User stories

US-M10-01 As a member, I want the AGM to happen on time with the accounts in front of me, so that the committee answers to us.

- AC-1: **Given** the financial year closed, **when** audited accounts are uploaded, **then** the system proposes an AGM date and generates the notice at least 21 days ahead, sent to every member by SMS and app.
- AC-2: **Given** the AGM date passes without a recorded meeting, **when** 30 days elapse, **then** the supervisory committee and (if configured) the Director are notified.

US-M10-02 As a committee member, I want officers' terms tracked, so that nobody overstays.

- AC-1: **Given** an officer within 60 days of term end, **when** the daily job runs, **then** the committee and the officer are notified.
- AC-2: **Given** an officer at the term limit, **when** re-election is recorded, **then** the system blocks it unless a resolution waiving the limit (where bye-laws allow) is attached.

M11. Year end and surplus appropriation

Requirements

ID	Requirement	Priority
FR-M11-01	Year-end close producing financial statements and the surplus for appropriation	Must
FR-M11-02	Appropriation engine enforcing: reserve ≥ 25% of net surplus; education fund ≤ 10% of the remainder (with Director approval flag); honoraria ≤ bye-law cap (default 7.5%); dividend on shares (cap configurable); bonus by patronage	Must
FR-M11-03	No dividend or bonus payable until committee approval and AGM confirmation are recorded	Must
FR-M11-04	Dividend and bonus calculated per member, set off against arrears where bye-laws allow, paid as a bulk payment (M8)	Must
FR-M11-05	Dividend reported in naira and as a percentage of average savings	Must
FR-M11-06	Member annual statement: opening, contributions, interest, dividends, loans, closing	Must

User stories

US-M11-01 As a treasurer, I want the surplus split by the law automatically, so that our accounts are compliant without a consultant.

- AC-1: **Given** a net surplus, **when** appropriation is proposed, **then** the reserve line is at least 25%, the education line at most 10% of the remainder, honoraria within the cap, and the remainder split between dividend and bonus per the committee's proposal.
- AC-2: **Given** a proposal breaching any rule, **when** saved, **then** it is rejected with the rule and the permitted value shown.
- AC-3: **Given** a valid proposal, **when** committee approval and AGM confirmation are recorded, **then** member-level dividend and bonus amounts are computed and a bulk payment list is created for approval.

US-M11-02 As a member, I want to see what my savings actually earned this year, so that I can judge the cooperative's performance.

- AC-1: **Given** dividends paid, **when** the member opens their annual statement, **then** dividend and bonus are shown in naira and as a percentage of their average savings.

M12. Exit, retirement and death

Requirements

ID	Requirement	Priority
FR-M12-01	Exit request with notice period (configurable, default 1–3 months)	Must
FR-M12-02	Exit eligibility: no outstanding loan, no active guarantee lien above the release threshold	Must
FR-M12-03	Exit computation: savings + shares + accrued dividends − sums due − exit charge; statement to the member	Must
FR-M12-04	Retirement: automatic flag on employer-file retirement date; deduction lines stop; retiree status per bye-laws	Must
FR-M12-05	Death: nominee claim workflow with documents; payout of balance less sums due; guarantor or write-off rule for outstanding loans	Must
FR-M12-06	Past-member liability period (Act s.29, default 2 years) tracked	Should
FR-M12-07	Payout within the bye-law period; overdue exits escalate to the supervisory committee	Must

User stories

US-M12-01 As a retiring member, I want my money paid on time with a clear statement, so that I am not chasing the cooperative after 35 years.

- AC-1: **Given** a retirement date in the employer file, **when** it is 60 days away, **then** the member is notified with an estimated exit statement.
- AC-2: **Given** the exit date, **when** eligibility passes, **then** a payout is created for approval with the itemised computation, and paid within the bye-law period.
- AC-3: **Given** a payout not made within the bye-law period, **when** the daily job runs, **then** the supervisory committee is alerted and the member sees the delay and its reason.

US-M12-02 As a nominee, I want to claim a deceased member's balance simply, so that the family is not delayed.

- AC-1: **Given** a registered nominee, **when** they submit a claim with death certificate, **then** the claim is verified against the nominee register and the computation is shown.
- AC-2: **Given** an outstanding loan, **when** the claim is computed, **then** the bye-law rule (guarantor, insurance, write-off) is applied and explained.

M13. Reporting, statements and regulatory returns

Requirements

ID	Requirement	Priority
FR-M13-01	Monthly society dashboard: cash, unapplied remittances, employer arrears by bucket, loan book, NPL ratio (member-caused only), liquidity ratio, illiquid-asset share against cap, dividend-on-savings to date	Must
FR-M13-02	Member monthly statement (app, USSD summary, PDF on request) and annual statement	Must
FR-M13-03	Financial statements and appropriation statement for any closed year	Must
FR-M13-04	Audit pack export for any period (journals, hash chain, statements, schedules, remittances, matches, payments, approvals)	Must
FR-M13-05	Director of Cooperatives annual return pack per state template	Should (R2)

ID	Requirement	Priority
FR-M13-06	Registry integration (CVN, CoopID) and CoopCHECK reporting under consent, when published	Could (R2)
FR-M13-07	Compliance calendar with alerts 30 and 7 days before: AGM, audit, Director return, CAC (if applicable), tax	Must
FR-M13-08	Anonymised cross-society metrics (arrears, default, on-time rates) for authorised regulators and lenders	Could (R2)

User stories

US-M13-01 As a committee member, I want one monthly page with our health figures, so that we see problems before members do.

- AC-1: **Given** a closed month, **when** the dashboard is opened, **then** every figure in FR-M13-01 is shown with its definition and the prior three months.
- AC-2: **Given** liquidity below the configured floor or illiquid assets above the cap, **when** the month closes, **then** the committee and supervisory committee are alerted.

US-M13-02 As a supervisory committee member, I want to export everything for a quarter, so that our inspection uses evidence, not assurances.

- AC-1: **Given** a period, **when** the audit pack is exported, **then** it contains every artefact in FR-M13-04 and a manifest with counts and totals that tie to the trial balance.

M14. Member channels (USSD, SMS, app)

Requirements

ID	Requirement	Priority
FR-M14-01	USSD menu: balance (savings, shares, loans); expected deductions this month with status; last 5 transactions; loan eligibility; consent to deduction; guarantor consent; vote (if enabled); query	Must

ID	Requirement	Priority
FR-M14-02	USSD authentication by PIN set at enrolment; PIN reset via verified phone and BVN challenge	Must
FR-M14-03	SMS notifications: schedule frozen, credit posted, deducted-awaiting-remittance, loan status, approvals needed, meetings, signatory changes	Must
FR-M14-04	Mobile app and web with full member functions and committee functions	Must
FR-M14-05	Languages: English first; Yoruba, Hausa, Igbo, Pidgin	Should
FR-M14-06	Agent-assisted enrolment and queries	Could (R3)

User stories

US-M14-01 As a member with a basic phone, I want my balance and deductions by USSD, so that I am not excluded for lacking a smartphone.

- AC-1: **Given** a member dials the code and enters their PIN, **when** they choose "Balance", **then** savings, shares and loan balances as of the last posting are shown within one USSD session.
- AC-2: **Given** "This month's deductions", **when** chosen, **then** each expected line with its status is shown.
- AC-3: **Given** three wrong PINs, **when** the third is entered, **then** USSD access is locked and an SMS explains how to reset.

US-M14-02 As a member, I want to be told when my deduction did not reach the cooperative, so that I can act.

- AC-1: **Given** a member line becomes deducted-awaiting-remittance, **when** reconciliation completes, **then** the member receives an SMS with the amount and the employer.

M15. Employer console

Requirements

ID	Requirement	Priority
FR-M15-01	Payroll officer login scoped to their employer and societies	Must
FR-M15-02	Download frozen schedules in the employer's layout; acknowledge receipt	Must
FR-M15-03	Upload remittance schedules; see parse results and mapping prompts	Must
FR-M15-04	Employer statement: lines received, missing, arrears by bucket, virtual account details	Must
FR-M15-05	Per-employee headroom view across all known deductions (with member consent)	Should (R2)
FR-M15-06	Multi-society view for employers with several cooperatives	Should

User stories

US-M15-01 As a payroll officer, I want to collect the schedule and send back the remittance in one place, so that I stop emailing spreadsheets.

- AC-1: **Given** a frozen schedule, **when** the officer logs in, **then** it is listed with period, total and a download in their layout.
- AC-2: **Given** the officer uploads a remittance file, **when** it is parsed, **then** line count, total and any unknown identifiers are shown before submission.

US-M15-02 As an HR director, I want proof that we remitted everything we deducted, so that we are protected from liability.

- AC-1: **Given** a period, **when** the employer statement is opened, **then** it shows deducted per the schedule, remitted per the bank credit, and any difference, with line detail.
- AC-2: **Given** all lines matched for a period, **when** the statement is downloaded, **then** it carries a "fully remitted" confirmation with the society's reconciliation reference.

M16. Estates and escrow (release 2)

Requirements

ID	Requirement	Priority
FR-M16-01	Estate project with budget (land, survey, legal, consent, infrastructure, construction, fees, finance, contingency ≥ 10%, margin), project account and subscriber list	Must (R2)
FR-M16-02	Land due-diligence record: registry search, charting status, litigation search, vendor authority, lawyer sign-off; land marked ineligible if under acquisition, "excision in progress" or unregularised	Must (R2)
FR-M16-03	Collection gates: substantive instalments blocked until master title perfected or consent lodged and each subscriber's agreement signed	Must (R2)
FR-M16-04	Developer and contractor records: registration (REDAN, LASRERA), performance bond, contract type, retention, milestone schedule	Must (R2)
FR-M16-05	Milestone certification by named QS or engineer; release token generated only when the evidence rule passes	Must (R2)
FR-M16-06	Allocation by the approved method (ballot, seniority, payment order) with witnessed record; allocation letters	Must (R2)
FR-M16-07	Title tracking per allottee to registered deed	Should (R2)
FR-M16-08	Carrying-cost calendar: ground rent, Land Use Charge, consent fees with alerts	Must (R2)
FR-M16-09	Quarterly subscriber report: collections, spend vs budget, milestones, title and approval status, arrears	Must (R2)

User stories

US-M16-01 As an estate committee, we want the system to stop us paying for land without due diligence, so that we never repeat the Idu-Sabo loss.

- AC-1: **Given** a land purchase payment, **when** it is initiated, **then** it is blocked unless a complete due-diligence record with lawyer sign-off is attached.
- AC-2: **Given** land marked "excision in progress", **when** a collection schedule is created, **then** substantive instalments are blocked and only refundable expressions of interest are allowed.

US-M16-02 As a subscriber, I want to know where my money is and how the estate is progressing, so that I can hold the committee to account.

- AC-1: **Given** a quarter ends, **when** reports run, **then** each subscriber receives collections, spend against budget, milestone status, title status and their own position.

US-M16-03 As a signatory, I want construction payments to need a certified milestone, so that we pay only for work done.

- AC-1: **Given** a construction payment, **when** initiated, **then** a milestone certificate by a registered QS or engineer must be attached and the release token generated before approval is possible.

M17. Platform administration, audit and security

Requirements

ID	Requirement	Priority
FR-M17-01	Society audit log of every user action, system job, configuration change and administrative action, viewable by the committee, supervisory committee and auditor	Must
FR-M17-02	Platform administrators cannot initiate, approve or sign payments, or write to ledgers outside business flows (SR-3)	Must

ID	Requirement	Priority
FR-M17-03	Administrative changes (adapter deploys, bank connection changes, key rotation) require two administrators and a 24-hour delay, and appear in affected societies' logs	Must
FR-M17-04	Support access to a society is time-bound, consented by the society and masked for personal data	Must
FR-M17-05	Adapter management: versioned employer and bank adapters with test fixtures and rollback	Must
FR-M17-06	Data export: a society can export all its data in open formats at any time	Must
FR-M17-07	Incident management and notification to societies within 24 hours of a material incident	Must

User stories

US-M17-01 As a committee, we want to see every action the platform's own staff take on our society, so that the platform cannot become the insider threat.

- AC-1: **Given** any administrative action affecting the society, **when** it is executed, **then** it appears in the society's audit log with both administrators' identities and the delay.
- AC-2: **Given** a support request, **when** support accesses the society, **then** access requires the society's consent, expires after the agreed time and is logged.

US-M17-02 As a society, we want to leave the platform with all our data, so that we are never locked in.

- AC-1: **Given** an export request, **when** it completes, **then** members, ledgers, journals, schedules, remittances, payments and documents are delivered in CSV, JSON and PDF with a manifest that ties to the trial balance.

Non-functional requirements

ID	Area	Requirement	Measure
NFR-01	Availability	Member channels (USSD, app) and webhook ingestion	99.5% monthly; webhook ingestion 99.9%
NFR-02	Performance	Statement or balance view	< 3 s at p95 for a society of 10,000 members with 30 years of history
NFR-03	Performance	Reconciliation run	10,000 lines matched and posted in < 5 minutes
NFR-04	Performance	Instruction to bank after final approval	< 60 s
NFR-05	Durability	Ledger and artefacts	Multi-region replicated; restore tested quarterly; RPO ⩽ 15 min, RTO ⩽ 4 h
NFR-06	Retention	Journals, schedules, remittances, payments, consents	⩾ 10 years
NFR-07	Integrity	Journal hash chain	Verified daily; any break raises a critical incident
NFR-08	Security	Authentication	Passkey or OTP for approvals; device binding for signatories; MFA for all staff
NFR-09	Security	Keys	Instruction-signing keys in HSM or cloud KMS; rotation ⩽ 12 months
NFR-10	Security	Insider threat	Penetration test annually including insider scenarios (admin, treasurer, signatory collusion of one)
NFR-11	Security	Data at rest and in transit	AES-256 at rest; TLS 1.2+ in transit; personal data field-level encrypted

ID	Area	Requirement	Measure
NFR-12	Privacy	NDPA 2023 and GAID 2025	Registered at the applicable level; annual compliance audit return; DPIA before release
NFR-13	Regulatory	CBN payments framework	Platform never holds funds; bank collaboration approved before go-live
NFR-14	Data residency	CBN circular (Jun 2026)	Personal and transaction data stored in Nigeria by 1 Jan 2027
NFR-15	USSD	Session design	Every journey completes within one 180-second session; ⩽ 5 menu levels
NFR-16	Accessibility	Web and app	WCAG 2.1 AA
NFR-17	Scalability	Platform	500 societies, 1 million members, 50 employers' adapters without architectural change
NFR-18	Observability	Jobs and integrations	Every scheduled job and webhook has a success metric and alert; dashboards per bank and employer adapter
NFR-19	Idempotency	All external inputs	Webhooks, statements, files and API retries processed exactly once
NFR-20	Portability	Society data	Full export available at any time in open formats (FR-M17-06)

Data, interfaces, assumptions and open issues

Core data entities

Entity	Key fields	Notes
Society	id, registration no., authority, CVN, bye-law parameter set (versioned), status	Parameters change only by resolution
Member	id, BVN/NIN, phone, employer, payroll id, grade, confirmation status, nominees, status	Duplicate checks on BVN, NIN, payroll id
Consent	member, type, scope, method, timestamp, hash, revocation	Referenced by every expected line
Deduction profile	member, gross pay, statutory deductions, third-party deductions, source, date	Drives headroom
Account (ledger)	society, code, type, member (if sub-ledger)	Chart seeded for cooperatives
Journal	id, society, period, lines, source event, actor, prev hash, hash	Append-only
Loan	member, product, amount, rate, method, tenor, schedule, guarantors, status, arrears cause	Employer-caused vs member-caused
Employer	id, payroll platform, id format, cut-off, pay day, contacts, virtual account, adapter version	One virtual account per society
Schedule version	employer, period, lines, total, hash, delivery log	Immutable
Remittance	employer, period, bank credits, file (raw), parsed lines	Raw file kept
Match result	line, classification, posting journal, variance case	One classification per line

Entity	Key fields	Notes
Variance case	type, amount, member, employer, owner, due, status, resolution	Visible to auditor
Employer receivable	employer, amount, age bucket, actions taken	Ages from pay date
Payment	type, evidence, beneficiary, amount, initiator, approvals, instruction, bank ref, journal	Posts on confirmation
Meeting / resolution	type, notice, quorum, votes, linked actions	Authorises parameter and signatory changes
Estate project (R2)	budget, title record, gates, milestones, subscribers, allocations	Release tokens

External interfaces

Interface	Direction	R1	R2
Partner bank	Both	Transfers, status, statements, webhooks, virtual accounts, name enquiry	Mandate verification, release tokens, second bank
Employer payroll	Both	File exchange (generic + two pilot layouts), console upload	IPPIS, Remita, state layouts; HRIS APIs where available
Identity	Out	BVN/NIN verification via aggregator	Employer HR verification
SMS and USSD	Out	Aggregator with short code	Additional languages
Direct debit	Both	—	NIBSS NDD via bank or PSSP
Registry and bureau	Out	—	CVN/CoopID, CoopCHECK when published
Title verification	In	—	LandVerify or manual e-GIS adapter

Assumptions

1. A partner bank agrees to virtual accounts, transfer and statement APIs and webhooks for society accounts in R1; bank-enforced mandate verification may arrive in R2 (until then, in-platform approvals with a scoped execution credential, limits and daily reconciliation).
2. Pilot employers (oil and gas, banks, parastatals) will exchange schedule and remittance files in a stable layout.
3. Societies accept that no credit posts without a schedule.
4. The one-third deduction cap is a configurable agreement term pending verification of the Labour Act text.
5. Members have mobile phones; at least half will use USSD rather than the app.

Dependencies

Partner-bank agreement and CBN collaboration approval; SMS and USSD aggregator; BVN/NIN aggregator; legal templates (tripartite deduction agreement, subscription agreement, platform terms); NDPA registration.

Open issues

#	Issue	Owner	Needed by
1	Which bank enforces the mandate and how (option 1–4 in the bank tab)	Partnerships	R1 design freeze
2	IPPIS onboarding, schedule template and remittance advice	Partnerships	R2
